Section Three: Reading Comprehension and Vocabulary		
(Questions 36-55)		
Read the two passages and choose (A), (B), (C), or (D) for each of		
the questions that follow.		

(Questions 36-45)

Like many places, Macquarie Island had invasive species species of non-native plants and animals with no local natural controls on their populations. First came the cats, which were used on ships to control rats. Then came the rabbits, which were brought by seal hunters as a source of food. The hunters came because Macquarie Island is visited by around 80,000 elephant seals each year. No hunting is allowed now, however, because the island is a wildlife sanctuary.

Macquarie Island has also been an accidental sanctuary for its invasive species. The rabbits found plenty to eat, and they ate an enormous amount of the island's plant life. In 1968, scientists wanted to decrease the rabbit population, so the European rabbit flea (which carries a virus called myxomatosis) was introduced. By the 1980s, the rabbit population had declined from 130,000 to only 20,000, and the vegetation on the island had begun to recover. But with few rabbits to eat, the cats began to prey on the island's seabirds, so scientists decided to kill the island's cats.

Problem solved? Unfortunately, the virus had only reduced the rabbit population, and with the cats gone, the rabbits' numbers increased again. Now, so much of the island's vegetation is gone that there have been landslides after heavy rains. One expert estimates that it will cost 16,200,000 dollars to finally solve the invasive species problem on Macquarie Island

(Ouestions 46-55)

Fugu, or puffer fish, is a famous and exotic food in Japan. It can also be deadly. People who eat the liver, skin, or some other body parts of the fish swallow a poison called tetrodotoxin, which stops human nerve cells from working. They risk dying - just like a famous Japanese actor named Mitsuguro Bando. In 1975, he spent an evening with friends eating fugu liver, because he enjoyed the **tingling** feeling it created in his mouth. But that tingling was caused by the poison. Soon, Bando couldn't move his arms or legs. Then he had trouble breathing. Eight hours later, he was dead.

You can still eat fugu in Japan in restaurants where chefs prepare beautiful plates of thinly sliced raw fugu
